

**Prof. Dr. Rifat ATUN**

Prof. Dr. Rifat Atun is one of the world's leading experts in the fields of global health policy, health systems transformation, and innovation management. A medical doctor by training, Prof. Atun also holds MBA, DIC, FRCGP, and FFPH degrees. He continues his academic career as Professor of Global Health Systems at the Harvard University T.H. Chan School of Public Health, where he provides global strategic consultancy on the restructuring of health systems, the development of financing models, and the scaling of innovation to maximize social impact. Having spent a significant portion of his professional career in the United Kingdom, Prof. Atun has held senior leadership roles within the National Health Service (NHS). He has gained extensive experience in healthcare integration, performance management, quality improvement, and the implementation of innovative health solutions. During his tenure at the NHS, his work on healthcare markets, new service models, and system efficiency became reference resources that guided various components of UK healthcare reforms. Prof. Atun is internationally recognized for his projects conducted with the World Health Organization (WHO), the World Bank, the G20, the OECD, and various national ministries of health. He has consulted for over fifty countries on health financing, access to healthcare, the development of innovation ecosystems, and strategic planning. In these efforts, he has focused particularly on strengthening health systems in low- and middle-income countries, managing epidemiological transition processes, and implementing sustainable financing models. With exceptionally high academic productivity, Prof. Atun has published numerous scientific articles, books, and reports on health systems transformation, large-scale policy implementation, the adoption of innovative technologies, and health economics. His work has been featured in distinguished journals such as *Nature*, *The Lancet*, and *The BMJ*, contributing models to the literature that shape global health initiatives. Furthermore, he has served on various Lancet Commissions, leading international teams in developing policy recommendations for cancer, infectious diseases, HIV/AIDS, health innovation, and global resilience. Prof. Atun's research focuses on evaluating health systems not only in terms of clinical outcomes but also regarding their impact on economic growth, social development, and

societal well-being. His work in areas such as digital health technologies, AI-based clinical decision support systems, the scaling of health innovation, and sustainable financing strategies has served as a guide for the health strategies of many nations. Today, Prof. Dr. Rifat Atun is regarded as one of the most influential figures in the global health arena at both the academic and policy-making levels. His endeavours to make health systems more resilient, inclusive, and sustainable continue to resonate significantly on the international stage.
